Dear All,

Recently i have a faced one issue where i required to change TR status from released to unreleased.

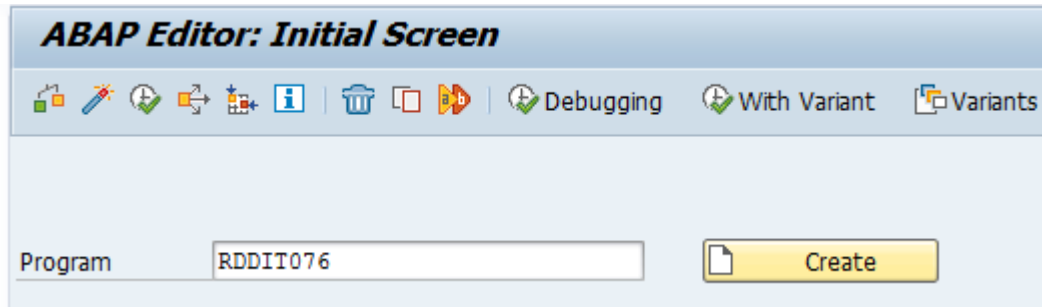

I have assumption that once we released TR(task) then we can not revert TR to modifiable, but that was wrong.

SAP have provided program using which we can do this.

Initially TR was in Released status.

**Step 1:** Go to SE38-> enter program name : RDDIT076 -> execute

**Step 2:** Enter TR/Task which status you want to convert from released to modifiable -> execute program

**Step 3:** you will find TR with R (Released) status.

## Overview of Requests

Request/Task	Typ	Stat	Target Sys	Requ	Owner	Date	Time	Higher-Level Request	Sour	Targ
7	W	D		CUST		06.01.2016			100	
8	Q	R		CUST		06.01.2016		7	100	

double click on R status(encircled in above screen), you will find below screen where need to edit R status to D status(D= Modified).

Display/Change Request/Task (Expert Mode)

Request/task: 8

Short Description:

Owner:

Last changed: 06.01.2016

Request type: Q

Status: R

Higher-lev.request:

Source client: 100

Category: CUST

Target system:

Target client:

click on Save. -> exit from program

**Step 4:** go to Se01-> enter TR name, you will find TR in unreleased(modifiable) status.

Regards,

Hitesh

Hi Hitesh,

Very nice and important Doc.

Thank you

Sathya

Hi Hitesh,

Nice document. Also, can you tell that does it mean we can release out TR again and it will not have any impact in QA?

Hi Parikh,

yes, we can do this..

using the same way which described in document.

but while you are doing it , it gives error message like:

Request XXXX has invalid attribute EXPTIMESTAMP..

in such case u just need delete that field from request description properties.

**Change request/task**

Request/Task  Workbench request

Properties Objects Documentation

Short Description

Project

Target

Source client

Owner

Status

Last changed

Attribute	Short Description	Value
SAPCOMPONENT	Single Component of System Com	
EXPIRATIONTIMESTAMP		20 8

but it is not recommended for sure.. 😊

Hello,

We can do the same modification by changing the standard Table E071.

in debug mode, change the mode display to change ( and change status to R)

The same impact , you must delete the timestamp in OT .

Hello Mustapha chabbi,

yes you are correct, the same ddic table used in the program RDDIT076..

but still I think it is not good practice to change the table in background via debugging, and we can achieve same objective via standard program 😊  
.

Thanks..

Hello Hitesh,

Of course using standard report is always the good way,

Thank you for sharing , it's very useful .

I want just to add a remark , in STMS of all target system, the first OT must be deleted from the queue, to limit the confuse in OT installation,

Regards
