How To Use Function Module READ_TEXT

Home / ABAP / How To Use Function Module...

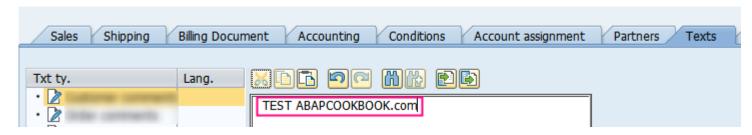

అపరమితమైన డిజైన్లు

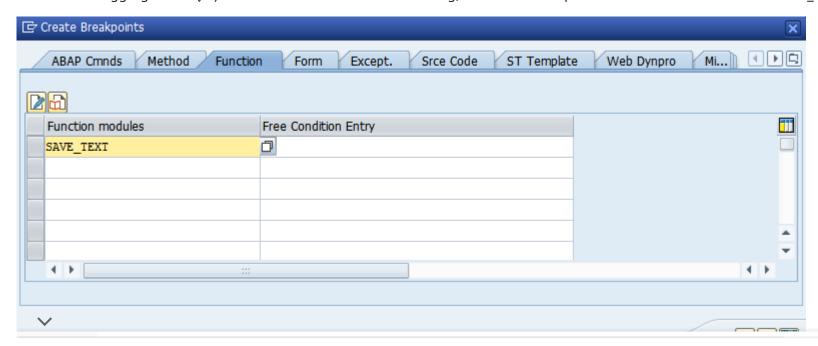

The first thing to do is to find the appropriate parameters to pass to the FM to retrieve that specific text.

Thus, modify the sales order in VAO2 and enter some text in the field you want to read the text.

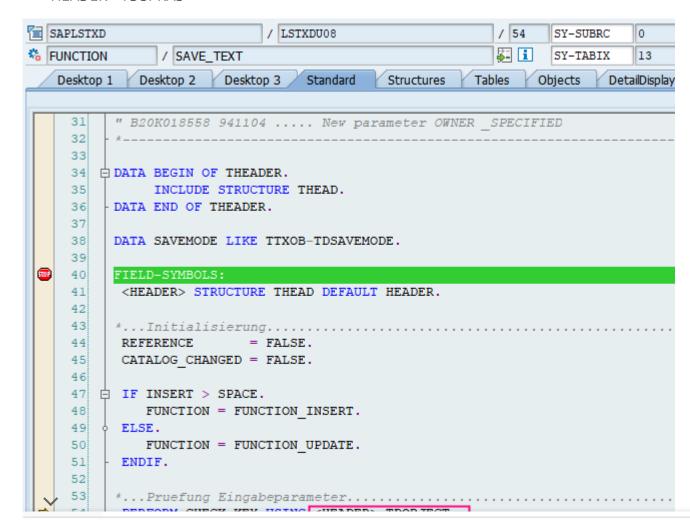

Step 2:

Activate debugging mode (/h) and save the sales order. In debug, create a break point on the function module 'SAVE TEXT'.

- <HEADER>-TDSPRAS

అపరమితమైన డిజైన్లు

Step 4:

Once the appropriate parameters have been found, pass them to the FM 'READ TEXT' and read the required returning text.

Please find below a sample code.

```
REPORT ZREADTEXT.
2
  *& Program Description:
  *& -----
  *& This demo program demonstrate how to use the function module
  *& 'READ_TEXT' to find standard text.
